Operation SILENT LANTERN — Parallel CTF (UFED-only) — Facilitator Guide

Instructor-only | *UFED-only (No PA/Streamline)* | *Shared dataset*

Key Change from Prior Version

This run is UFED-only. Remove all Streamline/PA references, and validate progress through UFED outputs (UFDX) plus learner notes and instructor checks.

Learning Objectives (Observed Behaviors)

- Select an appropriate workflow based on device type/state and investigative priority.
- Use Extraction Wizard to configure and execute targeted collections and produce UFDX outputs.
- Use Triage profiles/scans to confirm watchlist hits and prioritize next actions.
- Execute SIM extraction and pivot to related identifiers.
- Apply preserved handling for restricted evidence and articulate integrity validation steps.
- Fuse findings across UFED outputs and produce an evidence-backed intelligence lead package.

6-Hour Run-of-Show

00:00–00:20	Briefing: scenario, ROE, scoring, Forms access, evidence handling.
00:20–01:10	Mission 1: case setup + plan. Validate Case ID pattern and extraction path settings.
01:10–02:05	Mission 2: Content Types collection on Android. Coach on speed-to-first-intel.
02:05–03:00	Mission 3: Triage scan with watchlist. Ensure teams interpret Major/Minor correctly.
03:00–03:10	Break / intel inject (optional).
03:10–04:00	Mission 4: SIM extraction. Pivot to prior indicators.
04:00–04:50	Mission 5: Preserved iOS workflow. Authorization gate at ~04:25–04:35.
04:50–05:40	Mission 6: UFED-only fusion + brief. Collect final intel summaries.
05:40–06:00	Hotwash: compare approaches, discuss decision points, reinforce SOPs.

Instructor Control Points

- Shared dataset: Expect teams to converge on the same flags—use speed + reasoning quality as differentiators.
- Authorization Gate (Mission 5): Release AUTH code only after teams demonstrate preserved handling notes and explain why restricted handling is used.
- Hint Economy: Each team gets 3 hint tokens; each token = –2 points. Record token use visibly.
- Optional Intel Inject (~03:00): Provide an updated keyword or phone number; require a quick targeted check (Triage or Content Types).

- UFED-only validation: Spot-check the extraction folder for UFDX presence and correct naming/path discipline.

Scoring (Suggested)

- Flags (6 × 10 pts) = 60
- Mission analysis questions (approx. 6 × 5 pts) = 30
- Final intelligence summary = 10
- Speed bonus (optional): Top 3 teams +5/+3/+1
- Because dataset is shared, consider adding a +5 ‘tradecraft’ bonus for best documentation (artifact citations, clarity).

Facilitation Prompts (Coaching Questions)

- What is your speed-to-first-intel plan, and what are you deferring for later?
- Which UFED method best matches your mission question right now (Content Types vs Triage vs broader extraction)?
- How are you corroborating this indicator across at least two artifacts?
- What is your minimum evidence standard before you include an item in the final brief?
- How would you brief this to a commander in 60 seconds?
