Operation SILENT LANTERN — Parallel CTF

CTF Package | Inseyets.UFED v10.9-aligned | Duration: ~6 hours

Operational Context

You are part of a Joint Task Force Mobile Exploitation Cell supporting a coalition partner in a contested information environment. A hostile network is coordinating logistics disruption and influence operations using disposable devices, encrypted chats, and staged media drops. A partner unit executed a lawful, authorized site exploitation and recovered a small evidence set for rapid triage and exploitation. Your mission is to extract prioritized intelligence, identify the operational hub and next movement window, and produce a concise lead package.

Rules of Engagement (Training) & Integrity

- Work only on provided training devices/datasets. Do not connect personal devices.
- Follow classroom SOPs for evidence handling and documentation (case identifiers, notes, and artifact provenance).
- Do not attempt to circumvent security beyond the lab's authorized workflows and instructor guidance.
- All teams progress independently. Flags unlock the next mission section in the digital mission console (Microsoft Forms).
- Use time wisely: speed matters, but accuracy and defensible reasoning matter more.

Evidence Package (Per Team)

- Android device — "Runner Phone" (authorized training dataset)
- iOS device — "Coordinator Device" (restricted handling — preserved workflow required)
- SIM card + SIM adapter (authorized training dataset)
- Watchlist brief (keywords, phone numbers, and location focus areas)

Mission Flow

Complete Missions 1–6 in order. Each mission requires one Flag submission to unlock the next. Capture flags exactly in the required format.

Mission 1 — Establish the Collection Plan

- Create your Case Identifier and document your initial collection strategy.
- Initialize workflows and confirm where extractions will be saved.
- Submit FLAG-01 in the mission console.

Mission 2 — Runner Phone Rapid Indicators (Content Types)

- Perform a targeted collection to find the courier alias and near-term rendezvous indicators (time/place).

- Submit FLAG-02 and two supporting indicators.

Mission 3 — Watchlist Confirmation (Triage)

- Run a Triage scan using provided watchlist criteria.
- Identify the first criterion that produces a Major match.
- Submit FLAG-03.

Mission 4 — SIM Pivot

- Conduct a SIM extraction and identify subscriber-level identifiers.
- Find a contact or message that supports a pivot from Missions 2–3.
- Submit FLAG-04.

Mission 5 — Restricted Evidence (Preserved Workflow)

- Use the preserved handling workflow for the iOS dataset until the instructor releases authorization.
- After authorization, locate the planning artifact that points to the next action.
- Submit FLAG-05.

Mission 6 — Fuse & Brief

- Assemble the final target package code and produce a concise lead package.
- Submit FLAG-06 and your final intelligence summary.

Submission Formats (Strict)

Use these exact formats in the Microsoft Forms mission console:

- `FLAG-01: CASE:{JTF-####-TEAM#}`
- `FLAG-02: ALIAS:{word}`
- `FLAG-03: MAJOR:{datatype}:{value}`
- `FLAG-04: IMSI:{digits}`
- `FLAG-05: AUTH:{code-from-instructor}`
- `FLAG-06: TPL:{ALIAS}-{IMSI_last4}-{KEYWORD}`

Final Deliverable (What Success Looks Like)

Your final submission must provide a defensible operational picture: who (aliases/actors), what (activity), where (location indicators), when (time window), and recommended next steps. Focus on evidence-backed claims and cite the artifact source in your notes.
